

# Body Weight Planet

## your weight in space-age style

Body Weight Planet is the newborn scale in the Body Weight galaxy of coin operated weighing-machines manufactured in Italy by DPS-Promatic.

The Body Weight design (by Massimo Portolani) has taken care of any detail, as, for example, the aluminum height meter head and joints or the aluminum round head.

This slim, low cost yet very robust scale, has the following specifications:

- Weighs up to 200Kg in steps of 100g
- Measures up to 200cm in steps of 1cm
- Body made of steel (no plastics!)
- Robust, reliable and steady
- Prints a ticket on thermal paper
- Automatic cutter (customers cannot jam paper!)
- Calculates and prints BMI (Body Mass Index) the innovative method to assess people obesity used also by World Health Organization.
- Special second ticket with weight on the planets available (can be enabled by scale operator)

The Body Weight Planet display is highly visible, thanks to its blue backlight. It shows time, while waiting for a customer and shows weight and instructions after coin has been inserted.

### Body Weight PLANET

Space Planetarium  
Forlì - Italia  
Info:0543-723428

04-06-2004 17:30

Your Weight  
on Earth:

**80.0 Kg**

Your weight on  
the planets:

Mercury:	30.2 Kg
